Abstract:

On short notice, the Covid pandemic generated the need to replace classic face-to-face teaching with digital formats. With the experiences made during this time, the expectations of students have changed as to which digital offers they assume to be available in addition to the pure courses. With GeekChalk, a tool was developed that supports classic teaching with various handy functions and enables video live streams and recordings without extra effort for the lecturer. In this presentation I will give a brief overview of the tool and its possibilities.
