

- In the second quarter there will be more tutorials than in the first quarter. Lectures will usually be held Mondays, Tutorials will usually be held Wednesday.
- In week 45 Chapter 5 of the course book will be discussed (“Analytical Modelling of Parallel Programs”). Note that this Chapter is essential for the understanding of scalability and isoefficiency analyses that we will discuss during the next weeks.
- The third mandatory assignment is already be published in a preliminary version, the deadline will be approx. end of November.
- The fourth (and last) mandatory assignment will be published in week 46 or early week 47. You will have to chose an algorithm to be parallelized and analyzed w.r.t. to scalability yourself. (I will make some suggestions in the lecture). For the last mandatory assignment you will be requested to submit a short problem specification and a short working plan that satisfies certain requirements (within approx. 10 days after the assignment was announced). After a review of this you will work on the assignment. In addition to the usual report, you will have to make a short presentation of what you did in last week 51. More details will be given next week.
