

- Note that there is a different schedule in the second quarter (Mo 14-16 and Thu 8-10).
- In the second quarter there will be more tutorials than in the first quarter. Lectures will usually be held Mondays 14:15-15:45, Tutorials will usually be held Thursdays 8:15-10:45.
- In week 45 Chapter 5 of the course book will be discussed (“Analytical Modelling of Parallel Programs”). Note that this Chapter is essential for the understanding of scalability and isoefficiency analyses that we will discuss during the next weeks. I strongly recommend to prepare for this lecture and for the corresponding exercise sessions.
- The exercises for the tutorial session on Nov. 5th, will be published next Monday latest.
- The third mandatory assignment will be published after the lecture in week 45 (Nov., 2/11).
- The fourth (and last) mandatory assignment will also be published in week 45. You will have to chose an algorithm to be parallelized and analyzed w.r.t. to scalability yourself. (I will make some suggestions in the lecture). For the last mandatory assignment you will be requested to submit a short problem specification and a short working plan that satisfies certain requirements (within approx. 10 days after the assignment was announced). After a review of this you will work on the assignment. In addition to the usual report, you will have to make a short presentation of what you did in last week 51. More details will be given next week.

Announcement from the matalogifest planning committee:

Fredag d. 13 november er der matalogifest i fredagsbaren. Temaet er som datoen antyder selvfølgelig fredag d. 13-tema. Prisen inkl. spisning er: 125 kr.

Festen starter kl. 18:30.
