Responses

Is there something you would emphasize as your overall outcome from this course?

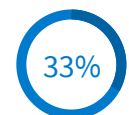

Responses

Everything was explained very thoroughly

General techniques for algorithms and analysis that can be applied in many places. Backwards analysis for example.

A really good intuition into design and implementation of complex algorithms as well as New and interesting techniques both for solving the different problems (like sweep line approach) and for the complexity analysis (like the backwards analysis).

Responses

Which topics did you enjoy the most?

Trapezoid maps
Triangulation
Plane sweep

Responses

Real-world like situations like the vacuum robot

Kd trees

Triangulation

Voronoi diagrams, linear programming

Trapezoid maps

Voronoi diagrams was definetly the topic i enjoyed the most especially implementing fortunes algorithm in project 2. Overall i stil thought that all the topic was very enjoyable and fun to learn about.

KD-Trees

Plane sweep

Range Trees

Voronoi

Responses

Which topics would it have been nice if we had skipped?

Responses

None

None since all the topics were enjoyable.

There might be too many search trees.

Responses

Do you want to emphasize anything the lecturer should change?

Responses

Everything was really good.

There could be some teacher notes on the topics online. For example scanning the papers used in class, to remember the process of an algorithm or topic

Have slides with examples and figures as pretty as made on the board - makes it a lot easier to read up on missed material

The lecturer does not need to change anything since I think he is really good at teaching and explaining all the topic and the complicated parts.

Sometimes there is a long gap between lectures and exercise sessions. Not really sure what the ideal gap is though, but something to consider

Responses

Do you want to emphasize anything the lecturer should keep doing?

Responses

Blackboard style teaching

Everything he is doing.

Keep teaching the course using the blackboard since that really helps with understanding the topics. Also the small recaps of the topics during exercise sessions was really nice.

Engagement

3

Responses

If you skipped lectures or exercises frequently, please explain (separately for the two) why this was.

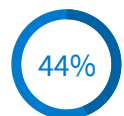

Responses

I missed a couple since I was sick.

Sickness

I didn't skip frequently however exercise sessions being so early in the morning did make it harder to concentrate

Mental health problems

Responses

Any further remarks?

Responses

I really enjoyed the course, wish I could have attended the lecture and exercise sessions more often.

Great course!

It has been a really interesting and fun course.
