DM26 Database Systems

Fall 2006 Project, HA(dat) Version

Department of Mathematics and Computer Science
University of Southern Denmark

October 13, 2006

Addition

For students of HA(dat), the project description is changed in the following way:

- The project will constitute the examination of the course.

- The project will be graded using the 13-scale.

- The project report must be written individually (not in groups).

- The lists of tasks is expanded by the following item:

  To consider which indexes would be relevant to add to your solution if the number of recipes and ingredients become very large, and to describe these considerations in the report. The indexes do not need to be implemented in your solution.

- The application of the project may be written as a web application (instead of a Java program), using PHP and MySQL.

- The code may be mailed to the lecturer (instead of using the `aflever` command on the Imada system).
