Introduktion til Datalogi, Efterår 2021

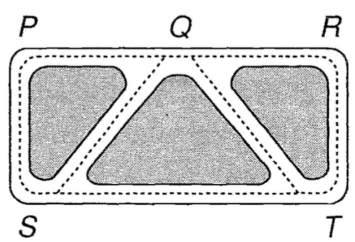
Jonas Vistrup

---

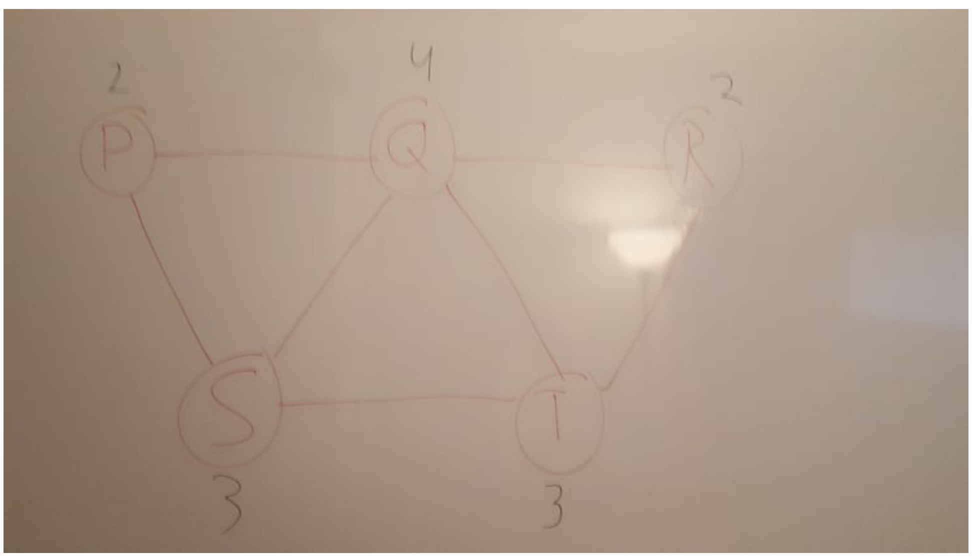
1 I

1.1

Draw the graph representing the road system in the figure below, and write down the number of vertices, the number of edges and the degree of each vertex.



SVAR:



5 vertices and 7 edges.

1.2

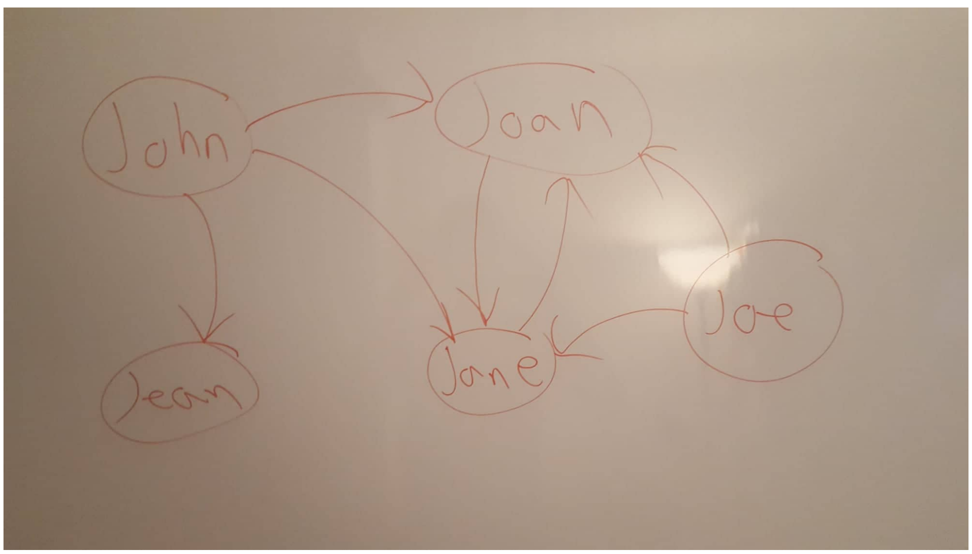
On Twitter:

(a) John follows Joan, Jean and Jane; Joe follows Jane and Joan; Jean and Joan follow each other. Draw a digraph illustrating these follow-relationships between John, Joan, Jean, Jane and Joe.

(b) Twitter has $\approx$ 313 million active users (June 2016, based on Twitter Inc.). Imagine you would like to store the digraph for the follow-relationships in an adjacency matrix that uses 4 bytes per entry on your new laptop which has 64 GB of RAM. Is this feasible?

(c) The municipality of Odense has a population of $\approx$ 200000 people. Let G be the graph where the meaning of an edge from vertex i to j is *"person i is friends with person j"*. Imagine you would like to store the adjacency matrix for this graph for the relationships in a matrix representation that uses 4 bytes per entry on your new laptop which has 64 GB of RAM. Is this feasible?

SVAR a:

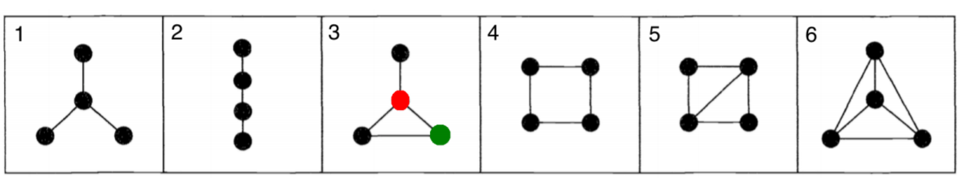


SVAR b: $(313 \cdot 10^6)^2 \cdot 4$ bytes $= 3.91876 \cdot 10^{17}$ bytes $> 64 \cdot 10^9$ bytes. No.

SVAR c: $(2 \cdot 10^5)^2 \cdot 4$ bytes $= 160 \cdot 10^9$ bytes $> 64 \cdot 10^9$ bytes. No.

1.3

Consider the following six graphs (note that the nodes do not have labels).



(a) How many walks of length 3 from the red vertex to the green vertex are there in graph 3?

(b) How many paths from the red vertex to the green vertex are there in graph 3?

(c) How many shortest paths from the red vertex to the green vertex are there in graph 3?

(d) For each of the graphs: what is the longest of all pairwise shortestpaths?

(e) Give an adjacency matrix for graph 1. Can there be different adjacency matrices for the same graph? If so, name a second adjacency matrix for graph 1. Can you find two different adjacency matrices for graph 6? All orders of vertex resulting in the same adjacency matrix for graph 6.

SVAR a: 4.

SVAR b: 2.

SVAR c: 1.

SVAR d: 2,3,2,2,2,1.

SVAR e:

$$\begin{bmatrix} 0 & 1 & 0 & 0 \\ 1 & 0 & 1 & 1 \\ 0 & 1 & 0 & 0 \\ 0 & 1 & 0 & 0 \end{bmatrix} \begin{bmatrix} 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 0 & 0 & 0 & 1 \\ 1 & 1 & 1 & 0 \end{bmatrix}$$

1.4

Let A be an adjacency matrix. In the lecture you learned that the ij-entry of A^k is the number of different walks from vertex i to vertex j using exactly k edges.

(a) What is the interpretation of ij-entry of the matrix $A^1 + A^2 + A^3$?

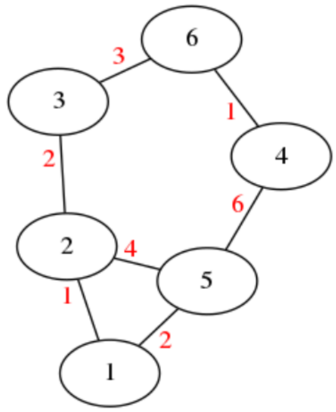
(b) Complete the following sentence with the missing expression: In a graph G with adjacency matrix A, vertex i and j are connected if and only if ... > 0.

SVAR a: The number of walks from i to j with length 1, 2 or 3.

SVAR b: $A^*[i, j] > 0$.

1.5

Let the following weighted graph (from the lecture slides, weights are depicted in red) be given:



It has the following distance matrix D:

$$D = \begin{array}{c} \\ 1 \\ 2 \\ 3 \\ 4 \\ 5 \\ 6 \end{array} \begin{array}{c} \begin{array}{cccccc} 1 & 2 & 3 & 4 & 5 & 6 \end{array} \\ \begin{pmatrix} 0 & 1 & 3 & 7 & 2 & 6 \\ 1 & 0 & 2 & 6 & 3 & 5 \\ 3 & 2 & 0 & 4 & 5 & 3 \\ 7 & 6 & 4 & 0 & 6 & 1 \\ 2 & 3 & 5 & 6 & 0 & 7 \\ 6 & 5 & 3 & 1 & 7 & 0 \end{pmatrix} \end{array}$$

(a) How many shortest path in G are of length 6? Name them. **SVAR:** 1-6, 2-4 and 4-5.

(b) How long is the longest of all pairwise shortest paths in the graph? Are there several longest shortest paths? **SVAR:** 1-4 and 5-6 are both 7 long.

(c) How many paths in G are of length 6? (Note: a path does not necessarily need to be a shortest path.) Name them. **SVAR:** 1-2, 1-6, 2-4, 3-5, 4-5.

1.6

Assume in this exercise that all weights on edges are non-negative values.

(a) In a graph G with $n = 6$ vertices, how many matrix-matrix multiplication operations are needed in the worst case in order to compute the distance matrix D, when the method of repeated squaring is used to compute D? **SVAR:** $\lceil \log_2(6) \rceil = 3$

(b) In a graph G with $n = 200$ vertices, how many matrix-matrix multiplications are needed in the worst case in order to compute the distance matrix D, when the method of repeated squaring is used to compute D? **SVAR:** $\lceil \log_2(200) \rceil = 8$

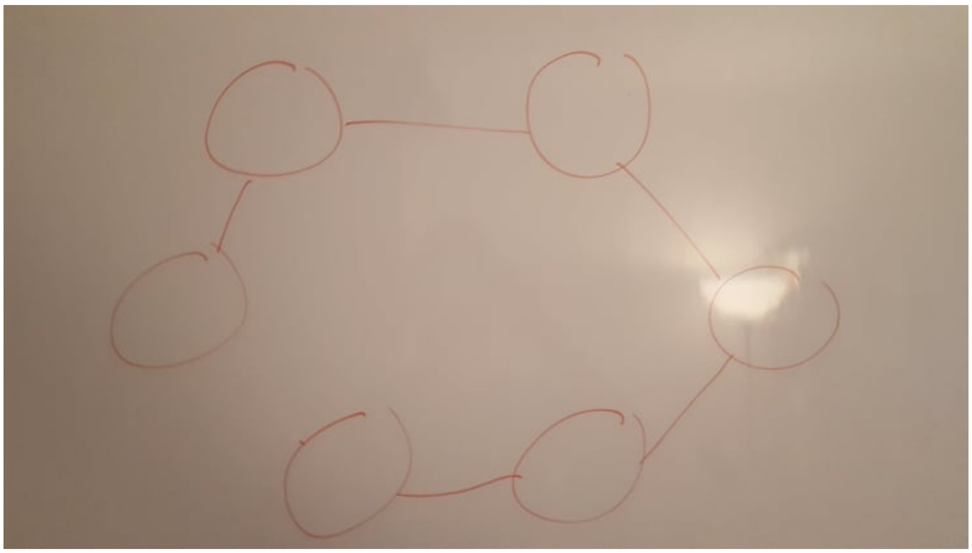
(c) Can you find a graph G with $n = 6$ vertices, for which $W^4 \neq W^5$? If so, depict it.

(d) Can you find a graph G with $n = 6$ vertices, for which $W^5 \neq W^6$? If so, depict it. **SVAR:** No, after each step at least one new vertex is visited if there is a change.

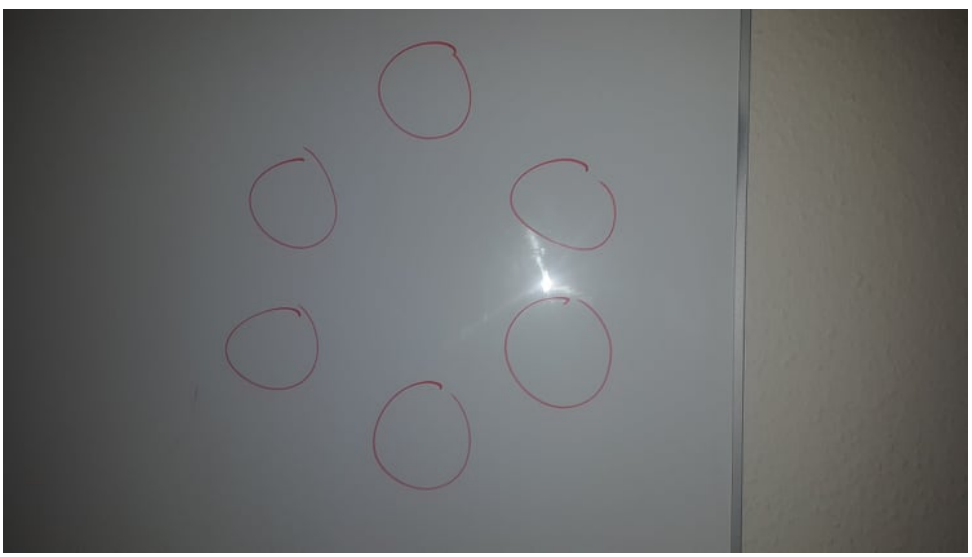
(e) Can you find a graph G with $n = 6$ vertices, for which $W^1 = W^2$? If so, depict it.

(f) What is the computational runtime in order to compute the distance matrix D for a graph G with n vertices if the method of repeated squaring is used to compute D? **SVAR:** $n^3 \log_2(n)$.

SVAR c:



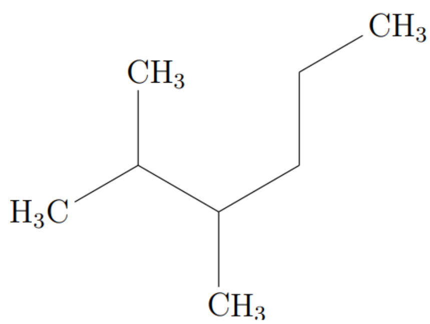
SVAR e:



2 II

2.1

Consider the following molecule (it's called 2,3-Dimethylhexane, see `https://en.wikipedia.org/wiki/2,3-Dimethylhexane`):



(a) How many carbon atoms does this molecule have?

(b) Draw the graph G corresponding to the carbon backbone of the molecule.

(c) Give the edge weight matrix W for the graph G.

(d) Use your brain or the Java program ShortestPaths.java to infer the distance matrix (Hint: the graph is rather simple, you won't need a program for that.)

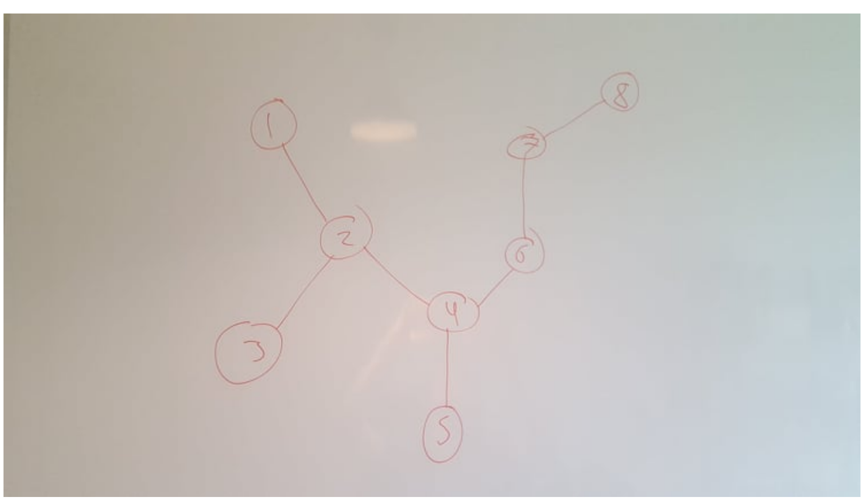
(e) What is the Wiener Index $\mathcal{W}(G)$?

(f) How many shortest paths of length 3 $i \to \dots \to j$ with $i < j$ are in G?

(g) Using Wiener's method for predicting the boiling point, what is your prediction for 2,3-Dimethylhexane?

SVAR a: 8.

SVAR b:



SVAR c:

$$\begin{pmatrix} 0 & 1 & \infty & \infty & \infty & \infty & \infty & \infty \\ 1 & 0 & 1 & 1 & \infty & \infty & \infty & \infty \\ \infty & 1 & 0 & \infty & \infty & \infty & \infty & \infty \\ \infty & 1 & \infty & 0 & 1 & 1 & \infty & \infty \\ \infty & \infty & \infty & 1 & 0 & \infty & \infty & \infty \\ \infty & \infty & \infty & 1 & \infty & 0 & 1 & \infty \\ \infty & \infty & \infty & \infty & \infty & 1 & 0 & 1 \\ \infty & \infty & \infty & \infty & \infty & \infty & 1 & 0 \end{pmatrix}$$

SVAR d:

$$\begin{pmatrix} 0 & 1 & 2 & 2 & 3 & 3 & 4 & 5 \\ 1 & 0 & 1 & 1 & 2 & 2 & 3 & 4 \\ 2 & 1 & 0 & 2 & 3 & 3 & 4 & 5 \\ 2 & 1 & 2 & 0 & 1 & 1 & 2 & 3 \\ 3 & 2 & 3 & 1 & 0 & 2 & 3 & 4 \\ 3 & 2 & 3 & 1 & 2 & 0 & 1 & 2 \\ 4 & 3 & 4 & 2 & 3 & 1 & 0 & 1 \\ 5 & 4 & 5 & 3 & 4 & 2 & 1 & 0 \end{pmatrix}$$

SVAR e:

$(1{+}2{+}2{+}3{+}3{+}4{+}5){+}(1{+}1{+}2{+}2{+}3{+}4){+}(2{+}3{+}3{+}4{+}5){+}(1{+}1{+}2{+}3){+}(2{+}3{+}4){+}(1{+}2){+}1$

$$= 20 + 13 + 17 + 7 + 9 + 3 + 1 = 70$$

SVAR f: 1-5, 1-6, 2-7, 3-5, 3-6, 4-8, 5-7. Total of 7.

SVAR g:

$$t_B = t_0 - \left(\frac{98}{n^2}(w_0 - \mathcal{W}(G)) + 5.5 \cdot (p_0 - p)\right)$$

$$t_0 = 745.42 \cdot \log_{10}(n + 4.4) - 689.4 = 745.42 \cdot \log_{10}(8 + 4.4) - 689.4 = 125.658$$

$$w_0 = \frac{1}{6} \cdot (n+1) \cdot n \cdot (n-1) = \frac{1}{6} \cdot (8+1) \cdot 8 \cdot (8-1) = 84$$

$$p_0 = n - 3 = 8 - 3 = 5$$

$$p = 7$$

$$t_B = 125.658 - \left(\frac{98}{8^2}(84 - 70) + 5.5 \cdot (5 - 7)\right) = 115.2205$$
