

Evaluation of DM815, Spring 2013

Summary

There were 7 students originally signed up for the course. Of these, all signed up for the exam, and 6 actually showed up. There were 5 respondents to the questionnaire, which is a rather high percentage of the students active in the course.

The distribution of grades among the students showing up for exam was:

Grade	-3	00	02	4	7	10	12
Number of students	0	0	0	2	2	0	2

Plan of action

Comments in the course evaluation suggest that more details on finding contact points and contact normals are given, a point I agree on, and which will be incorporated in the next version of the course.

Other than that, I find that the course evaluation does not give any reason for changes of the course.

Rolf Fagerberg, Imada, 1/9-2013.
